ORCID iD: 0000-0003-4730-7838

Project abstract:

The worldwide surge in online gambling opportunities has led to increasing demands to upscale national gambling regulations in order to promote (online) responsible gambling (RG) behaviors. However, scientific evidence on currently available online RG tools is limited, online RG tools are often focused only on players at higher risk, overlook key predictors of escalation into dysfunctional patterns of gambling behavior, and are poorly targeted and timed. Moreover, the limited collaboration between the gambling industry and the scientific research field has prevented the effective translation of scientific knowledge into evidence-based RG applications. This project is the result of a collaboration between academia and the gambling industry, with the goal of combining efforts to design online RG solutions more effectively protecting gamblers across all level of risk. Our goal is to develop and evaluate a comprehensive preventative intervention framework for online RG delivering high-quality, evidence- and theory-based RG tools to players based on their individual level of risk and pattern of gambling behavior. Our innovative RG framework combines a gambling risk assessment algorithm tracking players' behavior on a gambling website, with a newly designed library of RG micro-interventions to scaffold a player-tailored RG promotion model.

The project will run over 2 years encompassing a) the iterative development of the standardized library of RG tools based on the synthesis of existing scientific evidence and theory on RG interventions; b) the development of a recommendation system connecting the library of interventions with the risk assessment algorithm by using the power of artificial intelligence systems; c) the evaluation of a proof-of-principle (POC) version of the system, which will inform the development of the full RG framework.

The POC version of the RG framework will be introduced to customers of two gambling operator websites (in NL and the UK), deploying RG interventions mandated by gambling regulations and a selection of RG tools holding scientific promise. The evaluation of the POC will focus on feasibility and user acceptance (i.e., to what extent players engage with the RG tools, what is their experience with them), and potential impact on gambling risk in a mixed-methods study collecting quantitative and qualitative data. All players will dynamically receive sets of RG tools tailored to their current level of risk over a period of 6 months, with their level of risk assessed

daily. A subgroup of players will be further interviewed on their experience with the tools at conclusion of the quantitative data collection. The results will inform the final development of the full RG framework, including the entire library of interventions with a more advanced, self-learning version of the recommendation system, which will be able to decide which RG tools are best suited for each player to minimize escalation of risk, while not interfering with their play experience. With this project, we hope to support positive play via safety promotion for all and provide targeted interventions for harm reduction at the higher levels of gambling risk.

Amendment: This project developed and evaluated a POC RG intervention framework for online gambling platforms, combining a commercial behavioural risk assessment algorithm (BetBuddy; Dragicevic et al., 2019) with a library of evidence-based RG micro-interventions tailored to individual player risk level.

The project was originally conceived as a three-phase programme (POC, Alpha, Beta). The POC phase was completed with two operators: SunVegas (UK), where approximately 6,000 players participated in a 12-month study comprising 6 months of observational baseline followed by 6 months of POC framework deployment (April 2024 to March 2025); and Holland Casino Online (Netherlands), where approximately 12,700 players were observed across 12 months under mandatory responsible gambling tool conditions (October 2024 to October 2025). Dutch Kansspelautoriteit regulations precluded experimental tool assignment in the Netherlands, making that dataset observational in nature.

The Alpha phase (recommendation engine development) and Beta phase (adaptive system evaluation) were not initiated, as these depended on continued active operator partnerships which did not continue beyond the POC period.

The current focus is a post-hoc impact evaluation of the POC framework using the SunVegas Baseline to POC dataset, applying Bayesian Interrupted Time Series and multi-state modelling of risk transitions. The Netherlands dataset contributes descriptive and comparative analysis of behaviour under mandatory responsible gambling tool conditions. The planned qualitative component was implemented in reduced form; 23 interviews were completed with a subsample of players, and six Expert-by-Experience focus groups

A Safe Bet: design and pilot evaluation of a player-tailored online responsible gambling promotion framework

General

Please tick the following boxes if you agree to act according to the following terms:

- I will answer all questions truthfully and to the best of my knowledge
- I will discuss the data management plan with my research team
- I will check and, if necessary, update my data management plan a minimum of once a year

Support in writing a data management plan is available through the faculty Data Stewards. If your faculty has no Data Steward, support is available through the Research Data Management Specialist of the Erasmus Data Service Centre (EDSC is part of the University Library). Which research support professional is available for you?

- Data Steward of my own faculty - ESSB

Scientific research must be conducted in line with existing guidelines on good research practices and integrity. Please tick the boxes if you have read and understand these guidelines and will act accordingly.

- The European Code of Conduct for Research Integrity (ALLEA, 2017)
- The Netherlands Code of Conduct for Research Integrity (VSNU, 2018)

Administration & Project Description

Project title

A Safe Bet: development and pilot evaluation of a player-tailored online responsible gambling promotion framework.

Project start date as intended

2022-10-01

Project duration in months as intended

54

Funding body (if applicable)

Project (partially) funded by collaborating gambling operators and Large Grant from the International Centre for Responsible Gambling (ICRG)

Grant number (if applicable)

Not applicable.

Date of DMP Version 1

2022-08-01

Current DMP - Version [if other than version 1]

V3

Current DMP - Date [if other than version 1]

2026-09-10

List the name and affiliation of all members of the research team.

List the researcher responsible for research data management first.

For PhD projects, please indicate the Promotor(s) and/or Daily Supervisor(s) with a (!)

Briefly summarize the project background and research question(s) to help others understand the purpose for which the data are being collected or created.

Amendment:

The overarching goal of this collaborative project was to design, develop, and evaluate a preventative intervention framework for online responsible gambling (RG) in a naturalistic setting. The project combined a validated gambling risk assessment algorithm (BetBuddy; Dragicevic et al., 2019) using behavioural tracking data with a library of evidence- and theory-based RG micro-interventions and digital nudges.

This project was conceived as Phase I of a three-phase programme: a Proof-of-Concept (POC) evaluation, followed by an Alpha phase (recommendation engine development) and a Beta phase (full adaptive implementation). The POC evaluation examined (a) feasibility and user acceptance of the randomised RG framework, and (b) potential impact on gambling risk trajectories.

NOTE: Alpha and Beta phases did not proceed. See methodology section for full account of what was completed.

Specify the research type and briefly describe the methodology, the types of data to be collected, and the tools used for data collection

AMENDED: This section replaces the original methodology description in full. The project trajectory differed substantially from the original plan.

Phase 1 – Proof of Concept (POC): Completed

The POC phase was the only phase of the three-phase programme to proceed. It comprised a mixed-methods quasi-experimental study in which a risk-tailored RG tool framework was deployed to players on two online gambling platforms.

SunVegas (UK) – POC with intervention design

Approximately 6,000 players were included across a 12-month period (April 2024 to March 2025), comprising 6 months of observational baseline followed by 6 months of POC RG framework deployment. The POC framework assigned risk-tailored RG tool bundles to players monthly, based on BetBuddy risk classifications (Low/Medium/High), with tool sets including deposit limits, loss limits, reality checks, and a selection of add-on tools. Tool assignment within risk tiers included randomised add-on tool selection, enabling quasi-experimental comparison. Data were recorded continuously by the Playtech/SunVegas platform and transferred pseudonymously to EUR at the conclusion of the collection period. The POC was implemented with reduced scope compared to the original specification: not all planned tool types were implemented as designed, and messaging content was constrained by operator and platform limitations. This is documented in the technical production records.

Holland Casino Online (NL) – Observational baseline only

Approximately 12,700 players were included across approximately 12 months (October 2024 to October 2025). Due to Dutch Kansspelautoriteit (KSA) regulations, all responsible gambling tools are mandatory for all players by law; it was not possible to implement an experimental or randomised tool assignment framework. The Netherlands dataset is therefore observational in nature, capturing behaviour under mandatory RG tool conditions without experimental variation.

Phase 2 – Alpha: Not initiated

The Alpha phase was intended to train and refine a machine-learning recommendation engine using the POC dataset and qualitative input from Expert-by-Experience panels. This phase depended on continued active operator collaboration and access to live platform systems. Following the end of the active operator partnership with SunVegas (April 2025), the Alpha phase was not initiated. No Alpha data were collected.

Phase 3 – Beta: Not initiated

The Beta phase was intended to conduct a full impact evaluation comparing the adaptive ML-driven framework against the static POC version using Bayesian Interrupted Time Series and multi-state modelling. This phase could not proceed without an active operator partnership and a live adaptive system. No Beta data were collected.

Qualitative component: Revised scope

The original plan specified 80 semi-structured interviews with players (10 per risk-trajectory group x 4 groups x 2 sites). This was not implemented at the planned scale. Two qualitative components were completed: (1) 23 semi-structured interviews with Holland Casino and SunVegas players on their experience of the RG tools; and (2) 6 Expert-by-Experience (EbE) focus groups with individuals recruited from Holland Casino, contributing to tool interpretation, messaging feedback, and framework development. The operator collaboration formally concluded in January 2026.

Current analytical focus

The current analytical focus spans three areas. First, a post-hoc impact evaluation of the POC framework using the SunVegas Baseline to POC dataset, applying Bayesian Interrupted Time Series and multi-state modelling of risk transitions (the methodological approach originally planned for the Beta phase). The Netherlands dataset contributes descriptive and comparative analysis of behaviour under mandatory RG tool conditions. Second, Offline Policy Evaluation (OPE): the UK POC was structured in a way that satisfies the core requirements for OPE, as the monthly tool assignments followed documented rules with explicit randomisation, creating a formal decision process (monthly refresh events as decision points, tool bundles as actions, BetBuddy context as state). This enables counterfactual analysis of alternative intervention policies using the logged data, without requiring live deployment. This analytical stream is the primary focus of the research collaboration with Prof. Susan Murphy (Harvard). Third, both datasets are being reused under the ZonMw Thematische Consortia Kansspelersslaving 2025 to 2030 Project 4 research programme (governed by the linked ZonMw DMP).

Specify the [financial and time] resources needed to implement this data management plan

Amendment: Data collection and initial transfer costs were covered by the collaborating gambling operators (Holland Casino, Playtech/SunVegas) as an in-kind contribution. The operator collaboration formally concluded in January 2026.

Ongoing data management costs (storage, processing, and analysis) are covered by the PhD contract and EUR facilities. The complete dataset (~136 GiB) is currently held in EUR's ECDA research computing environment. Active storage and computational work are provided via SURF Research Drive and SURF Snellius HPC respectively, both covered under EUR's institutional SURF agreement.

Open Access publication costs are covered by VSNU and EUR Open Access publishing agreements with scientific journals.

Preparation: Legal Arrangements and Policy

1. With whom will you need to make legal arrangements?

- With third parties
- For working with multiple research partners
- With research participants

2. List the agreements that you will initiate and with whom will you make them.

Who	Type of agreement
Third-party	• Collaboration agreement (& sponsors): gambling operators amendments, and closure documentation (Holland Casino, Playtech/SunVegas – formally closed Q3 2025) • Non-disclosure agreement: Playtech • Data sharing agreement: Holland Casino
Multiple research partners	• Collaboration agreement: UvA • Non-disclosure agreement: UvA
Research participants	• Information brochure and opt-out consent (quantitative study). • Informed consent: obtained for 23 player interviews and six Expert-by-Experience focus groups
Third Party	• Awarded: funder ICRG

3. List the agreements or other data management policies that you need to uphold but did not initiate. If you are reusing existing data, list the terms of use under which you may re-use them.

Who	Type	Version and Date
MS Teams	Terms of Service	Version [June 15, 2021]
Holland Casino	Terms of Service (Privacy Policy)	Version [October 1, 2021]
PlayTech (VF2011 Limited; U.K., subsidiary of PlayTech Plc including Sun Vegas platforms)	Terms of Service (Privacy Policy)	Sun Vegas: Version [January 7, 2022]
EUR	Internet and ICT facilities policy	V1.0 [2015]
EUR	RDM policy of Erasmus University Rotterdam (EUR)	Version 1.0 [August 14, 2020]
Atlas.ti	Terms of Service	Version [December 15, 2021]
ICRG (if awarded)	Funding agreement	Version [November, 11, 2023]
OSF (Open Science Framework)	Terms of Use	Current version – osf.io/terms

4. Do you need to obtain ethical approval for your research project?

- Yes, I have obtained ethical approval

5. If you have obtained ethical approval, list the reference number

During research: Collecting and analyzing

6. Specify what data you will be collecting and indicate format, estimated size, and whether this is data that you will be generating or existing data that you will be re-using.

AMENDMENT: Original plan specified CSV format and 15 to 20 GB total. Actual data are in Parquet format and substantially larger (~136 GiB). User satisfaction surveys were not administered at the planned scale. Table below reflects what was actually collected.

Type of data	Format	Estimated size	Generated	Re-use
kafka_data event stream – HC NL (game rounds, logins, deposits, limit events, RG messages)	.parquet	~102 GiB / ~10,148 files / ~4.6B rows	Yes	No
kafka_data event stream – SunVegas UK	.parquet	~32 GiB / ~14,001 files / ~2.4B rows	Yes	No
BetBuddy daily risk scores (betbuddy_model_results) – both operators	.parquet	~500 MB / ~2.4M rows HC; ~3.0M rows SV	Yes	No
BetBuddy daily gambling stats (betbuddy_daily_stats) – both operators	.parquet	~500 MB / ~2.4M rows HC; ~2.9M rows SV	Yes	No
BetBuddy monthly snapshot and tool assignment (betbuddy_safe_bet_test) – both operators	.parquet	~50 MB / ~150K rows HC; ~42K rows SV	Yes	No
BetBuddy player ID mapping (betbuddy_players) – both operators	.parquet	~500 MB / ~2.4M rows HC; ~3.0M rows SV	Yes	No
Deposit limits log – both operators	.parquet	~100 MB / all 12,700 HC players; ~89K rows SV	Yes	No
Gaming limits log – both operators	.parquet	~200 MB / ~12,700 HC; ~226K rows SV	Yes	No
Self-exclusion records – both operators	.parquet	~50 MB / ~16% HC players; ~9% SV players	Yes	No
Time-slot exclusion records – both operators	.parquet	<1 MB / ~1 row HC; 0 rows SV	Yes	No
User satisfaction surveys – SunVegas UK (~100 responses, 1 time point)	.csv	<1 MB	Yes	No
User satisfaction surveys – Holland Casino NL (~150 responses x 2 time points)	.csv	<1 MB	Yes	No
Semi-structured player interviews (23 interviews)	.mp3; .docx	1–5 GB	Yes	No
Expert-by-Experience focus groups (6 sessions)	.mp3; .docx	1–5 GB	Yes	No

7. Will you be collecting [sensitive] personal data?

- No – My research involves human participants, but I will collect fully anonymous data
- Yes – Personal data [non-sensitive] -->Consult your faculty's Privacy Officer

8. If you collect [sensitive] personal data, how will you protect the privacy of participants when sharing your data?

- I will pseudonymize the data

9. Will you be collecting non-personal sensitive data?

- No

10. Where will you store your data during the project? You can select multiple options.

- EUR SURF Research Drive [for large collaborations]
- Other (please specify where will you store your data in the additional information box).
- EUR OneDrive

AMENDED: Original plan: EUR SURF Research Drive, EUR OneDrive, EUR Yoda. Actual storage: EUR ECDA research computing environment (VPN + RStudio Server), migrated from Playtech/ Future Library Lab (FLL) EUR - Google Cloud bucket (gs://eur_a_safe_bet).

Data were held by the collaborating operators in their own cloud infrastructure during collection. Following the conclusion of data collection, data were transferred to EUR via a secure Google Cloud Storage bucket managed by ERU FLL and subsequently migrated to EUR's ECDA research computing environment. Access is via VPN and browser-based RStudio Server; all data and computation remain within EUR infrastructure in the EU. No data are stored on personal laptops, external hard drives, or unapproved cloud services.

For the ZonMw Project follow-on research programme, data are being migrated from ECDA to SURF Research Drive for active project storage, with SURF Snellius HPC used for computational work. This is governed by the ZonMw Project 4 DMP.

11. Is this other tool / are these other tools supported by the EUR or is it private?

- EUR supported

12. What hardware and software do you use? Select all applicable options.

- Private hardware [e.g. personal laptop, private external hard-drive]
- EUR supported software as found in the software catalog
- EUR supported hardware [e.g. @wEURk laptop, @wEURk workstation]

14. Are regular backups made of your data?

- Yes, I use only EUR supported tools [as listed in Q12], thus regular backups are made automatically

EUR supported hardware and software are used throughout. Regular automated backups are maintained by EUR ECDA infrastructure. Analysis is conducted in R (RStudio Server) and Python, with version control. Data access is managed by the lead researcher (Dr Marilisa Boffo) and shared with the data manager (Harriet Galvin). ECDA is institution-managed, ensuring continuity in the event of staff changes.

15. Who manages access to the data?

- Researcher responsible for research data management
- Other (please specify who in the additional information box).

AMENDED: Data were initially stored by the collaborating gambling operators (Holland Casino, Playtech/SunVegas) under their own data handling policies and GDPR frameworks during the collection period. Following transfer to EUR and the formal close

of the collaboration agreement (Q3 2025), access to the data is managed by the lead researcher (Dr Marilisa Boffo, EUR) and shared with the PhD Student (Harriet Galvin). Data are held in EUR's ECDA research computing environment with access restricted to named project personnel.

16. Who will have access to the data (during the project)?

- A third party involved in my research (please specify in the additional information box)
- Only researchers as indicated under 'Administration & Project description'

AMENDED: Third-party access during data collection: both collaborating gambling operators (Playtech/SunVegas and Holland Casino) had access to their own customer data during the collection period. Following the formal close of the collaboration agreement (Q3 2025) and transfer of data to EUR, operator access ceased. Data are now accessible only to the named researchers listed under Administration and Project Description.

17. How are you going to make sure your data will be accessible in case of staff changes, illness, etc?

- There is a clear procedure in place in my research team, department, or faculty
- Other (please specify in the additional information box).

AMENDED: Data were held by the collaborating gambling operators prior to transfer to EUR, under the responsibility of the respective partners during that period. The collaboration agreement formally closed Q3 2025. All data are now held in EUR's ECDA research computing environment, managed by the lead researcher Dr Marilisa Boffo and shared with PhD Student Harriet Galvin. ECDA is institution-managed rather than dependent on individual researcher accounts, ensuring continuity in the event of staff changes or illness. Analysis code is version-controlled. Pre-registrations are published on OSF Registries; code, documentation and open materials are maintained on GitHub (github.com/a-safe-bet-research) and archived with DOIs on Zenodo at each publication.

18. Have you and your research team agreed on a way to name and order project folders and files?

- Yes - I am working on the documentation

19. Have you and your research team agreed on how to handle versioning of files?

- Yes - I am working on the documentation

After research: Data sharing, re-use

20. What data [and code] will be shared in a research data repository?

- A selection of the data [and code]

21. Please specify why you are unable to share [all] data [and code]

Raw player-level gambling data cannot be shared open access due to re-identification risk at scale and restrictions in the

operator data agreements. Qualitative interview and focus group recordings are destroyed following transcription. De-identified transcripts are held under restricted access to protect participant confidentiality.

22. List the data [and code] that you plan to share in a research data repository. Also list the information / documentation / metadata that you will include to make the data package self-explanatory and re-usable in the future (for other researchers and yourself)

AMENDED

Data	Format	Size
Analysis code (R and Python) for all published analyses	.R, .py	<5 GB
Synthetic benchmark datasets for code verification	.csv	<1 GB
Pre-registration documents	.pdf	<1 GB
Technical data report and codebook	.pdf	<1 GB
Processed aggregated data for replication (open access)	.csv	10–20 GB
Processed player-level feature datasets (restricted access via DANS)	.csv	50–150 GB
Anonymized user satisfaction survey scores – SunVegas UK	.csv	<1 GB
Anonymized user satisfaction survey scores – Holland Casino NL	.csv	<1 GB
Qualitative results (de-identified transcripts, codes and themes)	.docx, .txt	<1 GB
Readme / data documentation file	.txt	<1 GB

23. In which repository will you place the [meta]data and/or code that are associated with your paper?

- Other (please specify in the additional information box).

Open Science Framework (OSF) – pre-registration, open code, and open materials. DANS EASY – restricted-access player-level feature datasets (CoreTrustSeal certified). Zenodo – versioned code and model releases with DOIs. Raw Parquet files will be retained on SURF Research Drive under access controls per operator agreements and are not transferred to an open repository. GitHub (github.com/a-safe-bet-research) – code, documentation and open materials under version control. Zenodo – DOI-stamped archive of each repository at submission and publication.

24. What metadata standard will you use to document your research?

- DCMI [Dublin Core Metadata Initiative] (Note: Default within the EUR Data Repository)
- DDI (Data Documentation Initiative)

25. Will you place any restrictions on re-using of data?

- Yes, permanent restrictions – Restricted access

AMENDED: Raw player-level data cannot be shared open access due to re-identification risk at scale and conditions in the operator data agreements, which formally closed Q3 2025 but whose data handling conditions remain in effect. Data re-use for restricted-access deposits is limited to research purposes compatible with the original agreements; no commercial use is permitted. Open-access materials (code, processed aggregated data, documentation) available under CC BY-NC-SA 4.0 (documentation, materials, processed data) and PolyForm Noncommercial 1.0.0 (code)

27. Please specify the conditions under which data with restricted access may be re-used:

Openly shared data may be re-used solely to replicate the study analyses or to conduct meta-analytical analyses of intervention effects. No commercial use of the data will be allowed.

28. Under what license will you make your data available for re-use?

- Other (please specify in the additional information box).

AMENDED: Restricted access applies to all player-level data. Conditions: research purpose compatibility with original agreements; secure storage on approved infrastructure; no re-identification linkage; co-authorship norms; steering group approval required. Code: PolyForm Noncommercial 1.0.0. Documentation, materials and openly shared processed data: CC BY-NC-SA 4.0. Copyright Erasmus University Rotterdam.

29. Please specify which license

CC BY-NC-SA 4.0 (materials and data); PolyForm Noncommercial 1.0.0 (code)

After research: Archiving

30. You may be obliged to destroy some data before archiving. Do any of such obligations apply to you?

- Yes - Privacy law [e.g. personal data of participants]

AMENDED: Intermediate working files, temporary data extracts, and duplicate raw files: deleted following project completion per EUR data retention policy.

31. List the data you will be archiving. These data constitute your archival package.

Data	Format	Est. size	Access
Collaboration agreements (EUR–Holland Casino, EUR–Playtech/SunVegas)	.pdf	<1 GB	Restricted
Non-disclosure agreements	.pdf	<1 GB	Restricted
Data sharing agreements (per operator)	.pdf	<1 GB	Restricted
